DETAILED ACTION

Allowable Subject Matter

Claims 1-40 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 1 recites the limitation wherein a method of serially transferring annihilation information in a PET scanner comprises the step of generating a first address signal, the first address signal comprising a first address, the first address representing the first channel, the first address signal being synchronous to the clock signal. Prior art teaches a method comprising the steps of generating a time pulse representing a time-of-occurrence of a first annihilation event and generating a first time signal, but fails to specify the above limitation.

Claims 11 and 27 recite the limitation wherein an apparatus to serially transfer annihilation information in a PET scanner comprises a first address signal generator, the first address signal generator generating a first address, the first address representing the first channel, the first address signal being synchronous to the clock signal. Prior art teaches an apparatus comprising a generator generating a time pulse representing a time-of-occurrence of a first annihilation event and a generator generating a first time signal, but fails to specify the above limitation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Crossetto (US 2004/0195512) discloses a method and apparatus for anatomical and functional medical imaging.
